	ill be stored with a delay, Sen pen it after 10 seconds.

CO-EYE CheckPoint APP with BLE bracelet

Main Benefits

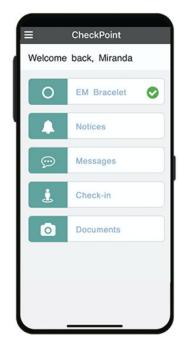

- Continuous confirmation approach generally employs a secure, body-worn tether linked via radio frequency, with the smartphone
- Hybrid approach offers multiple layers of confirmation, including a tether combined with a biometric validation to operate the smartphone
- Highly flexible and can be modified as needed based on risk level, compliance, or other considerations.

Key Features

- Automatically continuous background
 proximity monitoring
- Continuous background capturing GPS/WIFI/Cell point to confirm location
- Cost-effective two-piece model for massive offenders or staffs monitoring
